ABSTRACT

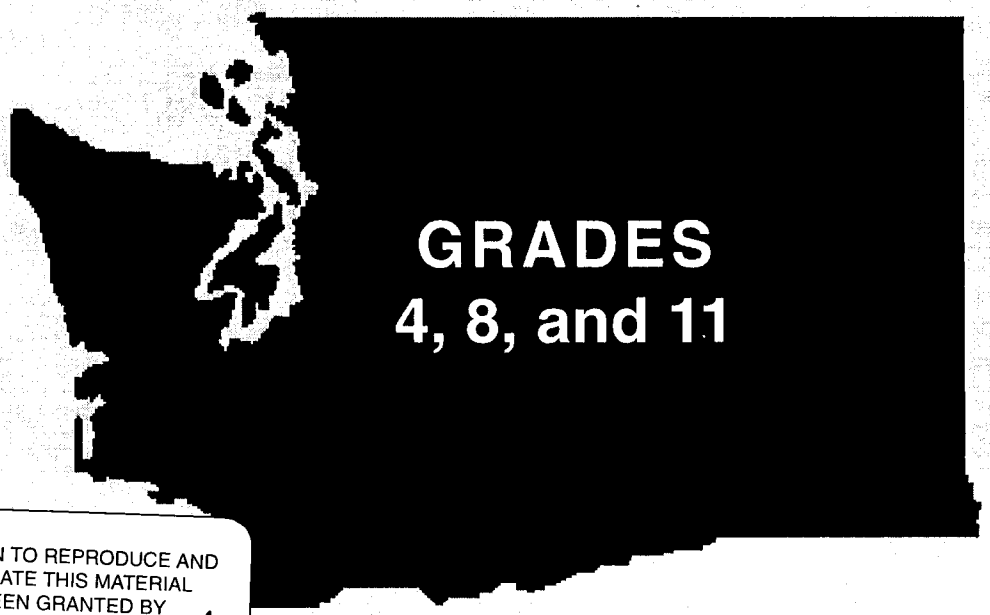

This report provides a summary for the years 1993 through 1997 of district and school-level results in Washington on the Comprehensive Tests of Basic Skills, fourth edition (CTBS/4) for grades 4 and 8 and the Curriculum Frameworks Assessment System (CFAS) for grade 11. For grades 4 and 8, the average national percentile scores in reading, language, mathematics, and the total battery are reported. For grade 11, the average Washington state percentile scores are reported for English/language arts, history/social science, mathematics, and science. For districts at all three grade levels, the percentage of students tested on each subtest is reported. Fewer than 85 percent of Washington's 11th graders are tested each year, although about 93 percent of fourth graders are tested. Results for district and school levels are reported in a lengthy table for each grade. (SLD)

March 1998

A Five-Year Summary of Achievement Test Trends in Washington School Districts Grades 4, 8, and 11

Since October 1976, the Washington State Assessment Program has collected information each fall about student achievement in Washington's public schools. Most recently (beginning October 1991), students in Grades 4 and 8 have been tested with the Comprehensive Tests of Basic Skills, 4th edition (CTBS/4), and students in Grade 11 have been tested with the Curriculum Frameworks Assessment System (CFAS). In subtests measuring reading/language arts, mathematics, science, and history/social studies, the CTBS/4 and CFAS require students to read critically, to solve multistep problems, and to apply their knowledge of important ideas, principles, and procedures.

This report provides a five-year summary (1993–97) of district and school-level results on the CTBS/4 and the CFAS. The report is divided into three sections—one for each grade level 4, 8, and 11. For Grades 4 and 8, the average national percentile scores in reading, language, mathematics, and for the total battery are reported. For Grade 11, the average Washington State percentile scores are reported for English/language arts, history/social science, mathematics, and science. (No total battery score is calculated at Grade 11.)

A district's or school's mean percentile score (percentile equivalent of the mean normal curve equivalent [NCE]) indicates the percentage of students in the national (Grades 4 and 8) or Washington State (Grade 11) norm group whose scores are lower than the average score for the district or school. For example, a district or school average percentile score of 60 means that 60 percent of the students in the norm group had scores lower than the district's or school's average student. By way of comparison, the score of the average student in both the national and Washington State norm groups is always 50 for all subtests.

For all districts at all three grade levels, the percentage of students tested on each subtest is reported. The percentage tested is calculated by dividing the number of students with test scores by the district's enrollment for that grade. There are many reasons why districts test less than 100 percent of their students. For example, state policy allows districts to exclude students with severe learning disabilities or limited English proficiency. In many districts, especially at Grade 11, students are absent from school during regular testing and do not return for make-up testing. In many other cases, again especially at Grade 11, the reasons for missing student scores are not reported by districts.

Testing less than 100 percent of the students can reduce the validity of the group scores as indicators of grade-level achievement in a district. However, the higher the percent tested, the more likely it is that the scores reported are valid

A Five-Year Summary of Achievement Test Trends in Washington School Districts Grades 4, 8, and 11 (continued)

estimates. Therefore, as a practical rule of thumb, if the number of students tested at a grade is 85 percent (or more) of grade enrollment, the average score is probably a reasonable estimate of grade-level achievement on the test. Below 85 percent tested, the validity of the average score as an estimate of grade-level achievement is questionable.

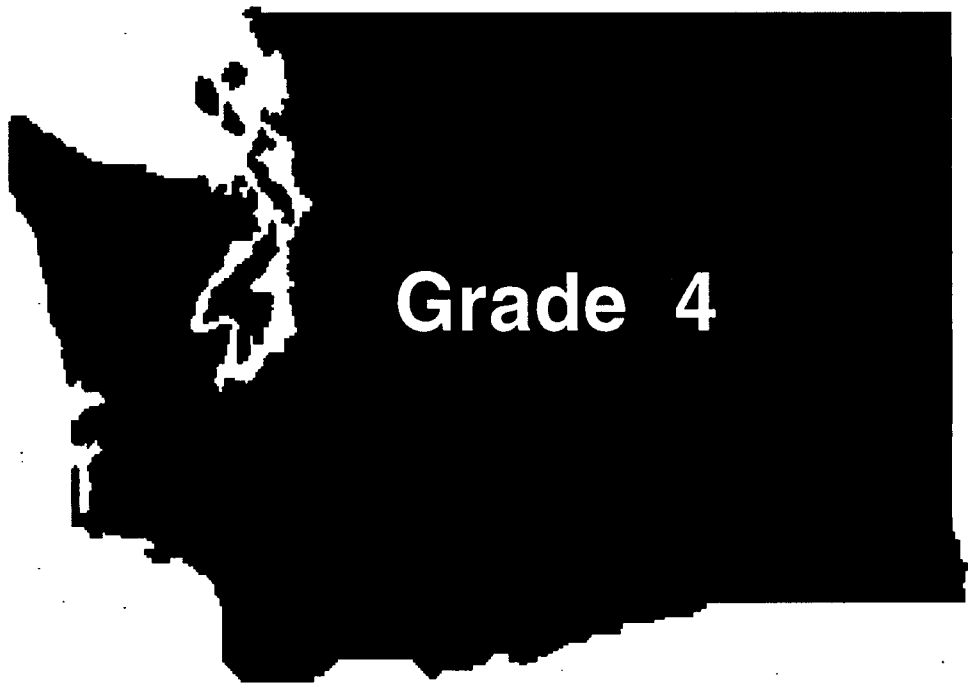

Below are the five-year summary data for all students tested in Washington. As the table indicates, less than 85 percent of Washingtons 11th graders are tested each year. Although the CFAS scores reported are valid achievement estimates for those students tested, considerable caution should be used in generalizing to the state's entire 11th grade enrollment.
